Leading  
Aggregator of  
Premium Journal  
Information

A stylized illustration of a computer monitor with a grey base and a dark grey bezel. The screen is divided into a light blue header bar and a dark blue main content area. The text is displayed in the main content area.

More than  
**90,000 publications in  
over 450 databases**

What is EBSCO?

EBSCO or EBSCOhost is the name of a "database" or a group of "databases." These are collections of electronic sources to use for academic purposes. Some examples of the types of sources you can find in EBSCO databases are: academic journals, newspaper or magazine articles, ebooks, primary sources, reviews, video, audio, images, etc. ■

# 大學穿搭我最潮

EBSCO Taiwan

由 Ethan Huang 發佈 [?]

· 3月6日 ·

好不容易延後的學期終於開學，博科四寶為了慶祝新學期開始，決定穿出年輕的自己。也順便紀念逝去的青春...小編想分享給大家...👉歡迎大家分享自己大學時候的穿搭！  
如果大家對流行穿搭有興趣，不妨參考Flipster流行趨勢雜誌👉 <https://flipster.ebsco.com/category-detail/category/fashion>

# Record Structure for APA Databases

## INTRODUCTION

This document provides background information on the record structure used for APA PsycInfo® and the full-text databases APA PsycArticles® and APA PsycBooks®.

Each field is presented in alphabetical order. Following the comprehensive description of the APA PsycInfo record structure, we provide links to sample records and other training and support materials. The names of fields in this guide are those used on APA PsycNet®. A chart for field names on EBSCOhost, Ovid, and ProQuest is linked at the end of this guide.

We indicate which fields are required (appearing in every APA PsycInfo record); repeating (may have multiple values in a single APA PsycInfo record); and searchable. "Searchable" means this field has its own label in a dropdown menu or filter on the Advanced Search Page. Additional fields may be included in an "Any Field" search, or discoverable through Browse menus or other tools.

## Abstract

**Field Properties:** required, repeating, searchable

Records for virtually all books, chapters, and journal articles include summaries or abstracts. Author- or publisher-provided abstracts are preferred. In some cases, an abstract may need slight modification, and when one is not present, an abstract is created by APA staff.

As of 2016, records can have more than one abstract. Every record will continue to have an English scientific abstract. Some records will also have Impact Statements or summaries of the research prepared for a non-specialist. Impact Statement is available as a search limit. Abstracts in languages other than English are also included in the record when they are available from the publisher.

**Historical Note:** From 1995, dissertation records contain abstracts. Journal-provided abstracts have been used with little modification, whenever possible, since 2003. Older APA PsycInfo records have a higher percentage of staff-written and modified journal abstracts.

**Helpful Hint:** The abstract is not a high-relevance field for searching because its greater length and narrative form increase the likelihood of unwanted retrieval compared to the more tightly controlled descriptor and keyword fields.

However, including the abstract in a search is useful when your topic is unusually specific, when your project requires a comprehensive search that will retrieve even marginally relevant material, and when there are no appropriate index terms for the concept(s) you want to research.

## Affiliation

**Field Properties:** repeating, searchable

The author's affiliation indicates the institution or organization with which the author was affiliated when the research was conducted, or the manuscript was written.

Affiliation contains the name of the institution, business, or organization and its geographical location. Street addresses, building names, and so forth are not included in the affiliation.

**Example:**

Anderson, Peterz  
Centre for Quality of Care Research, University Medical Centre Nijmegen, Nijmegen, Netherlands

If an author indicates that they are in private practice and gives a geographical location, "Private Practice" can be entered as the author's affiliation.

**Example:**

Kakoschke, Celia  
Private Practice, Bendigo, VIC, Australia

**Historical Note:** Up to 2002, only the first author's affiliation was entered into the document. Since then, affiliations are entered and displayed for all authors when the information is available.

**Helpful Hint:** An author's membership in a professional association is not considered an affiliation.

## Age Group

**Field Properties:** repeating, searchable

Age Group provides standardized terms for age ranges of human populations. The most specific age group terms are applied, and there is no limit on the number that can be applied to one record.

Childhood (birth–12 yrs)

Neonatal (birth–1 mo)  
Infancy (2–23 mo)  
Preschool Age (2–5 yrs)  
School Age (6–12 yrs)

Adolescence (13–17 yrs)

Adulthood (18 yrs & older)

Young Adulthood (18–29 yrs)

Thirties (30–39 yrs)  
Middle Age (40–64 yrs)  
Aged (65 yrs & older)  
Very Old (85 yrs & older)

**Historical Note:** The present list of Age Groups has existed from 1996 to the present. The three broad Age Groups (Childhood, Adolescence, and Adulthood) have been assigned by indexers since 1984 and are also applied to all records in which a narrower Age Group appears. Age Group values have been mapped back in the database to 1967; most of the records before 1967 do not have Age Groups.

### APA PsycInfo® Classification

**Field Properties:** repeating, searchable

The APA PsycInfo Classification system consists of four-digit numerical codes representing broad psychological subject areas.

These are listed on the APA website at [www.apa.org/pubs/databases/training/class-codes](http://www.apa.org/pubs/databases/training/class-codes)

APA PsycInfo Classification has 22 broad categories each of which, except for 3800 Military Psychology, includes at least one subcategory.

**Historical Note:** In 1992, APA PsycInfo Classification expanded from 17 to 22 categories; these were mapped back to all records.

**Helpful Hint:** The APA PsycTests® database has its own separate list of APA PsycTests Classification [www.apa.org/pubs/databases/training/psyc-tests-class-codes](http://www.apa.org/pubs/databases/training/psyc-tests-class-codes)

You can use them to search in much the same way as the APA PsycInfo Classification, but we recommend that you search APA PsycInfo and APA PsycTests separately for best results.

**Helpful Hint:** Using APA PsycInfo Classification in searching can help limit retrieval to a specific setting. If you are looking for concepts for which the terminology is the same across multiple disciplines, limiting to Classification is a useful strategy.

### Audience

**Field Properties:** searchable

*Only used in Book and Chapter records.*

There are two possible values for Audience:

General Public Use  
Professional & Research Use

EBSCO

Psychology

Tips

# How to search effectively and efficiently

**Usage**

**Quotation Marks**

**Define your search**

1. Define your search: Using keywords.
2. Use helpful database tools:
  - Basic or advanced search.
  - Boolean operators (AND, OR, NOT.)
  - “Full text” and “peer reviewed” options.
  - Narrowing down results.
3. Choose databases: Using multiple databases at once.
4. Use the citation tool (disclaimer = corrections might be needed!)

**Boolean Operators**

**email**

**Notion**

# Define your search

- Prepare a list of keywords for your topic:
  - Ex: fast food, obesity, overweight, junk food, diet, children, ...
- Find out the preferred terms for this database (hint: “Subjects”):
  - Ex: “Convenience foods” “fast food restaurants” “food habits”
- Use quotation marks for multi-word terms:
  - Ex: “fast food addiction” “consumer attitudes”

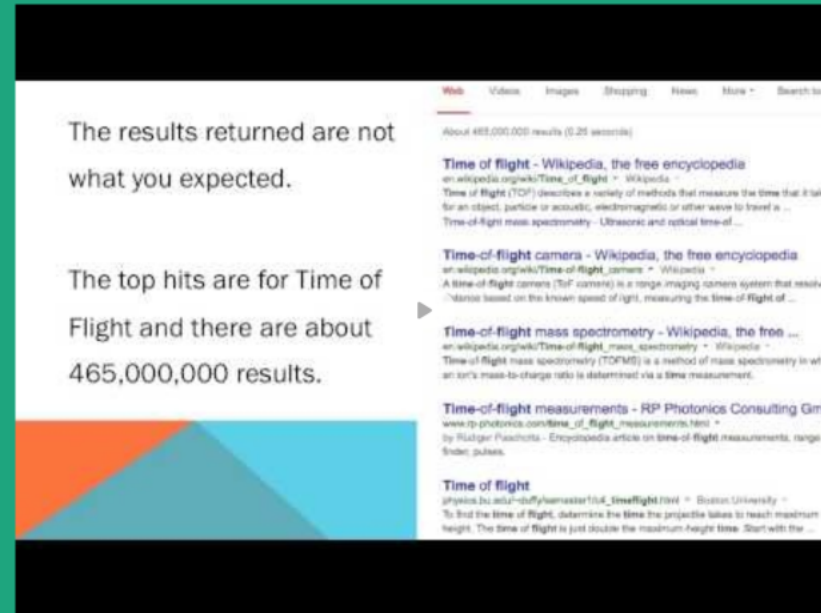

# Boolean Operators- And, Or, & Not

# Using Quotation Marks in Searches

The results returned are not what you expected.

The top hits are for Time of Flight and there are about 465,000,000 results.

## Transcriptome-wide mapping reveals a diverse dihydrouridine landscape including mRNA.

Dihydrouridine is a modified nucleotide universally present in tRNAs, but the complete dihydrouridine landscape is unknown in any organism. We introduce dihydrouridine sequencing (D-seq) for transcriptome-wide mapping of D ...

## Integrated mRNA and miRNA Transcriptome Analysis Suggests a Regulatory Network for UV-B-Controlled Terpenoid Synthesis in Fragrant Woodfern (Dryopteris fragrans).

Fragrant woodfern (Dryopteris fragrans) is a medicinal plant rich in terpenoids. Ultraviolet-B (UV-B) light could increase concentration of terpenoids. The aim of this study was to analyze how UV-B regulates the terpenoid synthesis of the ...
